

MP Briefing Pack — Splink / probation-to-police pilot

What's in this folder, and how to use it

Context: Noah Wild-Hebbs (Parliamentary Assistant to Iqbal Mohamed MP) asked for the briefing, FOI requests, and supporting information on the MoJ Splink "probation-to-police" pilot, and said the office can draft questions to the MoJ and look at raising it in Parliament. This pack is the response.

File	What it is	How to use it
00-COVER-EMAIL-to-Noah-Wild-Hebbs.md	The reply email text	Paste into your email to Noah. Attach the PDF below.
Parliamentary-Briefing-Pack-Splink.pdf	The full pack as one clean, A4, print-ready document (13 pp)	Attach this to the email. It contains the briefing note, the draft WPQs, the FOI requests, and the evidence annex, formatted for a parliamentary reader.
01-BRIEFING-NOTE.md	The briefing note (editable source)	If they want a Word/Markdown version or want to edit it.
02-DRAFT-WPQs-to-MoJ.md	16 draft Written Parliamentary Questions to the MoJ (+ 2 Home Office)	Noah can table/adapt these directly. Grouped by theme; A and D blocks are the strongest to lead with.
03-FOI-REQUESTS.md	Ready-to-send MoJ FOI text + the parallel ABS request	Complementary to the WPQs (FOI compels documents; WPQs are faster).
04-EVIDENCE-ANNEX.md	Every claim with its primary source + confidence markers + all links	The receipts. Point them here to verify anything.

The one thing to keep straight

Splink = **Ministry of Justice** (the probation-to-police pilot). **Palantir** = **Home Office / DHSC** (the trial the office already asked about). They are *separate systems with no documented link* — questions to the right department, so neither can deflect by answering about the other.

Suggested order of play

1. Send the cover email + PDF to Noah.
2. He tables the **A block** (North Essex pilot) and **D block** (the research-vs-operational contradiction) WPQs first — the most concrete and hardest to dodge.

3. File the MoJ FOI in parallel.

4. Follow up on the WPQ answers — the value is often in what the Department *won't* confirm.

Everything is built from public documents; the full investigation and the ~96 archived source screenshots are in the GitHub repo linked in the annex.
